## NOTES:

1. 150 W without moving air or 200 W with 5.3 CFM forced air provided by user for " B " version. The adequacy of cooling air is judged by the measured core temperature of transformer T 1 below $75^{\circ} \mathrm{C}$ at $25^{\circ} \mathrm{C}$ ambient, or below $100^{\circ} \mathrm{C}$ at $50^{\circ} \mathrm{C}$ ambient.
2. Ripple and noise is maximum peak-to-peak voltage value measured at output within 20 MHz bandwidth, at rated line voltage and output load ranges, and with a $10 \mu \mathrm{~F}$ tantalum capacitor in parallel with a $0.1 \mu \mathrm{~F}$ ceramic capacitor across the output.
3. All models may be operated at no-load without damage. At no load, output voltage fluctuates beyond $5 \%$ due to the burst-mode operation of the control IC in them for energy saving.
