## DESCRIPTION

The PM201 series comprising single and multiple output models for 150 to 200 watts of continuous output power is specially designed for medical and ITE applications. They operate at 90 to 264 VAC input voltage without the need of a selector strap. All auxiliary outputs are with magnetic amplifier linear regulator to keep regulation. The units are constructed on a printed circuit board with a U-bracket for mechanical support and heat sinking. A cover and fan assembly can be added during manufacturing

## FEATURES

- Low safety ground leakage current
- Meet EN55011, EN55022 and FCC Class B
- Power Factor 0.98 typical
- Short-circuit protection
- Power Fail Detect (PFD) signal
- 100\% burn-in at full rated load
- Optional cover and fan assembly
- Remote inhibit - TTL high to disable output
- Compliant with RoHS requirements

## INTERFACE SIGNALS

PFD: TTL logic high for normal operation and TTL logic low upon loss of input power. This signal appears at least 1 ms prior to V1 output dropping $5 \%$ below its nominal value. This signal also provides a minimum delay of 100 ms after V 1 is within regulation.

Inhibit: Requires an external TTL high level signal to inhibit outputs for standard models

NOTES:

1. Suffix "B" in model numbers denotes U-bracket form. Change " $B$ " to " $C$ " for enclosed form with cover and fan assembly, e.g. PM201-45C.
2. Peak output current is 12 A on $+12 \mathrm{~V}, 9 \mathrm{~A}$ on +15 V and 6 A on +24 V .
3. Output \#4 is floating. It can be connected externally for positive or negative output.
4. 200 watts for " $C$ " version with a cover and fan assembly. 100 watts for "B" version without moving air (maximum current of output \#1 \& \#2 derated to $50 \%$ ), or 200 watts with 25 CFM forced air provided by user.
5. When the remote Sense facility is not used, +Sense must be connected to +V , and - Sense to return, on P2 connector.
6. All models may be operated at no-load. At no-load, output voltage tolerance increases to $\pm 10 \%$.
7. Ripple and noise is maximum peak to peak voltage value measured at output within 20 MHz bandwidth, at rated line voltage and output load ranges, and with a $10 \mu \mathrm{~F}$ tantalum capacitor in parallel with a $0.1 \mu \mathrm{~F}$ ceramic capacitor across the output.
