## DESCRIPTION

The PM650 series comprising single and multiple output models for 650-700 watts of continuous output power is specially designed for medical and ITE applications. They operate at 90-264 VAC input voltage without the need of a selector strap. The units are constructed on a printed circuit board with a U-bracket for mechanical support and heat sinking. A cover and fan assembly can be added during manufacturing.

## OUTPUT SPECIFICATIONS

Output voltage/current: See rating chart.
Maximum output power: See rating chart.
Ripple and noise:

Overvoltage protection: Provided on output \#1 only; set at $115-140 \%$ of its nominal output voltage All outputs protected to short circuit conditions All outputs $\pm 0.04 \% /{ }^{\circ} \mathrm{C}$ maximum Maximum excursion of $4 \%$ or better on all models, recovering to $1 \%$ of final value within 500 us after a $25 \%$ step load change Fan power: 12 V at 400 mA maximum for B version, 12 V at 100 mA maximum for C version

## INTERFACE SIGNALS

PFD: TTL logic high for normal operation and TTL logic low upon loss of input power. This signal appears at least 1 ms prior to V1 output dropping $5 \%$ below its nominal value. This signal also provides a minimum delay of 100 ms after V1 output is within regulation.

Inhibit: Requires an external TTL high level signal to inhibit outputs for standard models

## NOTES:

1. Suffix "B" in model numbers denotes U-bracket form. Change "B" to "C" for enclosed form with cover and fan assembly, e.g. PM650-14C.
2. All outputs are floating. They can be connected externally for positive or negative output.
3. Output \#1 can be adjusted within $+/-5 \%$ of their nominal voltage.
4. Output \#3 can be adjusted within $+/-15 \%$ of their nominal voltage.
5. 650-700 watts for "C" version with cover and fan assembly. 325-350 watts for "B" version without moving air (maximum current of output \#1 and \#2 derated to 70\%), or 650-700 watts with 50 CFM forced air provided by user.
6. All models may be operated at no-load. At no-load, output voltage tolerance increases to +/-10\%.
7. Ripple and noise is maximum peak to peak voltage value measured at output within 20 MHz bandwidth, at rated line voltage and output load ranges, and with a $10 \mu \mathrm{~F}$ tantalum capacitor in parallel with a $0.1 \mu \mathrm{~F}$ ceramic capacitor across the output.
