DESCRIPTION

The PU201 series comprising single and multiple output models for 150 to 200 watts of continuous output power is specially designed for ITE and industrial applications. They operate at 90 to 264 VAC input voltage without the need of a selector strap. All auxiliary outputs are with magnetic amplifier linear regulator to keep regulation. The units are constructed on a printed circuit board with a U-bracket for mechanical support and heat sinking. A cover-and-fan assembly can be added during manufacturing.

NOTES:

1. Suffix “B” in model numbers denotes U-bracket form. Change “B” to “C” for enclosed form with cover-and-fan assembly, e.g. PU201-45C.
2. Peak output current is 12 A on +12 V, 9 A on +15 V and 6 A on +24 V.
3. Output #4 is floating. It can be connected externally for positive or negative output.
4. 200 watts for “C” version with a cover-and-fan assembly. 100 watts for “B” version without moving air (maximum current of output #1 & #2 derated to 50%), or 200 watts with 25 CFM forced air provided by user.
5. When the remote Sense facility is not used, +Sense must be connected to +V, and -Sense to return, on P2 connector.
6. All models may be operated at no-load. At no-load, output voltage tolerance increases to ±10%.
7. Ripple and noise is maximum peak-to-peak voltage value measured at output within 20 MHz bandwidth, at rated line voltage and output load ranges, and with a 10 µF tantalum capacitor in parallel with a 0.1 µF ceramic capacitor across the output.
