

- SIL4 Package
- Input Range $\pm 10\%$
- Efficiency up to 86 %
- Isolation 3000 VDC
- Continuous Short Circuit Protection
- Operation Temperature Range $-40 \sim 90\text{ }^{\circ}\text{C}$ max.
- Non Conductive Black Plastic Case

RoHS

EFT	IEC 61000-4-4	±2.0 kV with external components	A
Surge	IEC 61000-4-5	±2.0 kV with external components	A
CS	IEC 61000-4-6	10 Vrms	A
PFMF	IEC 61000-4-8	100 A/m	A

Physical Specifications	
Parameter	Value
Case Material	Nonconductive Black Plastic (UL94V-0 rated)
Pin Material	Copper
Potting Material	Silicone UL94V 0 rated
Weight	1.9 g, typ.
Dimensions	0.46" x 0.29" x 0.40"

Thermal Derating

To enhance the system reliability, the power module should always be operated below the maximum operating temperature. If the temperature exceeds the maximum operating temperature, reliability of the unit may be affected.

Output Voltage Tolerance

12V & 24V input with 12V & 15V output

Test Configurations

Input Reflected Ripple Current Test Step

Input reflected ripple current is measured with a source inductor L_{in} (12 μH) and a source capacitor C_{in} (47 μF , ESR < 1.0 Ω at 100 kHz) at nominal input and full load.

Design & Feature Configurations

Isolation Voltage

This series is designed to meet the functional insulation of UL, both input and output should be maintained within SELV limits (less than 42.4 V peak, or 60 Vdc).

The isolation test voltage represents a measure of immunity to transient voltages and the part should never be used as an element of a safety isolation system. The part could be expected to function correctly with hundreds of volts offset applied continuously across the isolation barrier; but then the circuitry on both sides of the barrier must be regarded as operating at an unsafe voltage and further isolation/insulation systems must form a barrier between these circuits and any user-accessible circuitry according to safety standard requirements.

Repeated High-Voltage Isolation Testing

Repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. This series has isolation transformers without additional insulation between primary and secondary windings of enameled wire.

While parts can be expected to withstand several times the stated test voltage, the isolation capability does depend on the wire insulation.

Any material including the enamel (typically polyurethane) is susceptible to eventual chemical degradation when subject to very high applied voltage, thus implying that the number of tests should be strictly limited.

We strongly advise against repeated high voltage isolation testing, but if it is absolutely required, the isolation test voltage should be reduced by 20 % from specified test voltage.

EMC Filter Details

EMC Filter

The part (1) Circuit is used to meet Surge & EFT test, and the part (2) Circuit is used to meet EMI test.

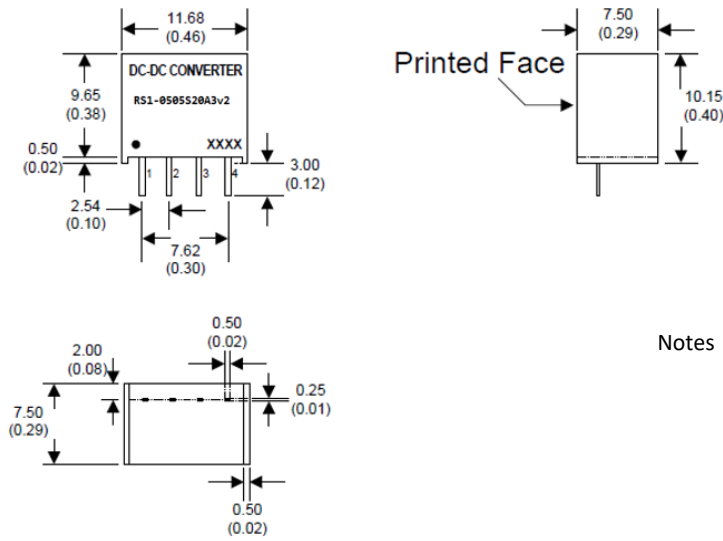

V in	C1	C2	D1	C3	L1
05 Vdc	Nippon Chemi-con KY-Series 470 μ F / 100V	DNP	SMDJ6.0A	MLCC 10 μ F / 50V	10 μ H
12 Vdc			SMDJ9.0A		
15 Vdc			SMDJ18.0A		
24 Vdc	Nippon Chemi-con KY-Series 680 μ F / 100V	SMDJ30.0A	22 μ H

4	+Vout

Mechanical Specifications

Notes : All dimensions are typical in millimeters (inches).

1. Pin dimension tolerance: ± 0.05 (± 0.002)
2. Pin pitch and length tolerance: ± 0.35 (± 0.014)
3. Pin to case tolerance: ± 0.5 (± 0.02)
4. Case Tolerance: ± 0.5 (± 0.02)

Recommended Footprint Details

Notes : All dimensions are typical in millimeters (inches).

Pad size(lead free recommended)

1. Through hole (black): $\varnothing 0.80$ (0.031)
2. Top view pad (green): $\varnothing 1.00$ (0.039)
3. Bottom view pad (pink): $\varnothing 1.60$ (0.063)
4. The extra protection of the pads between input (PIN 2) and output (PIN 3) should be needed in order to ensure that the isolation function won't be affected after the module mounts on the PCB.
